Summary of End Point Assessment

This document sets out the requirements for end-point assessment (EPA) for the Level 6 Rail and Rail Systems Senior Engineer integrated degree apprenticeship standard. It is written for end-point assessment organisations (EPAO) that need to know how EPA for this apprenticeship must operate. It will also be of interest to Rail and Rail Systems Engineer apprentices, their employers, awarding universities and training providers.

In an integrated degree apprenticeship, the degree incorporates on-programme academic and workplace learning and assessment with an independent EPA to test the standard's KSBs. The Undergraduate degree must consist of 380 credits; 320 delivered on-programme and 60 through the EPA. It will typically take four to five years to complete, with the EPA taken in the last eight months.

The EPA should only start once the employer is satisfied that the apprentice is consistently working at, or above, the level set out in the standard, the pre-requisite gateway requirements for EPA have been met and that they can be evidenced to an EPAO. As a gateway requirement, apprentices must successfully pass 320 on-programme credits, have compiled a portfolio of evidence and have had a technical work-based project outline agreed with their employer and academic supervisor. In addition, apprentices without English and mathematics at level 2 must achieve level 2 prior to taking their EPA.

The EPA must be completed within a maximum 6-month period, after the apprentice has met the EPA gateway requirements.

Awarding Universities will be responsible for the on-programme and EPA requirements. They must be on the Education & Skills Funding Agency (ESFA) Register of Apprenticeship Training Providers (RoATP). In addition, they must be approved to offer the EPA for this standard and be on the ESFA Register of End Point Assessment Organisations (RoEPAOs).

The EPA consists of 2 distinct assessment methods:

- A specialist area, technical work-based project, with presentation to a panel based on the technical work-based project, followed by questioning
- An occupational competence interview, conducted by the same panel as the workbased project presentation, based on the work-based evidence

Performance in the EPA will count towards the overall degree classification. Apprentices cannot successfully complete the degree apprenticeship without successfully passing the EPA.

Performance in the EPA will be separately graded and determine the apprenticeship grade of pass, merit, distinction or fail.

Rail and Rail Systems Senior Engineer Integrated Degree apprenticeship standard

Diagram 1. Typical Rail and Rail Systems Senior Engineer Integrated Degree apprenticeship summary

End Point Assessment Overview

Assessment Method	Area Assessed	Assessed by	Grading
Specialist, technical work-based project and Presentation	Knowledge, skills and behaviours (as indicated in Annex A)	End-Point Assessment Organisation	Fail/Pass/Merit/Distinction
Occupational competence interview (with Portfolio)	Knowledge, skills and behaviours (as indicated in Annex A)	End-Point Assessment Organisation	Fail/Pass/Merit/Distinction

Please note that on-programme assessment does not count toward the EPA/Apprenticeship grade but the EPA will contribute to the final degree classification.

Performance in the two end point assessment methods is combined to determine the EPA and Apprenticeship grade of fail, pass, merit or distinction.

The rules of combination for the final grade are straightforward:

• the apprentice will be assigned the lowest grade awarded for any individual assessment component as the final grade.

End Point Assessment Gateway

Gateway requirements:

- An apprentice's employer must confirm that the apprentice is working at, or above, the level set out in the standard; employers may wish to take advice from the apprentice's University
- An apprentice must hold a portfolio of evidence demonstrating competence against the standard. The portfolio will be used to underpin the EPA occupational competence interview. It may also be used to support the evidence requirements for professional recognition, should the apprentice wish to apply. It must therefore be presented in line with the relevant professional body's guidance. It will be mapped to the knowledge, skills and behaviours relating to the assessment method that it supports and typically contain performance review documentation, witness statements, training records/certificates and work products such as risk assessments, reports, meeting records, plans and costings. The portfolio cannot include self-assessment other than records of learning activities targeting their own performance (to support demonstration of Behaviour B7).
- An apprentice must have completed 320 on-programme credits and have passed all on programme modules.
- English and mathematics at level 2.
- An apprentice must have a technical work-based project outline agreed with their employer and academic supervisor, based on their option specialism within the standard. The outline must detail the project title, scope, key activities/milestones and expected outputs/measures of success. The 24-week period will start at gateway sign off.

Portfolio requirements:

On commencement of the apprenticeship the apprentice must begin to retain a portfolio of evidence which must be finalised before passing through the gateway. A completed portfolio of evidence is a **compulsory** EPA gateway requirement that underpins the EPA Occupational competence interview component.

Employers/training providers are free to devise their own version of the portfolio of evidence, but the portfolio of evidence should typically contain the following information:

- the name of the apprentice
- details of the apprentice's workplace
- a minimum of 8 and a maximum of 10 pieces of evidence to support the knowledge, skills and behaviours of the apprenticeship standard. (Evidence can be provided through a range of sources, for example work reviews, manager's feedback and customer feedback)
- Records of learning activities targeting their own performance (to support demonstration of Behaviour B7)
- confirmation from the line manager that the tasks were completed to the required standard of the organisation
- document the off-the-job training that has taken place during the on-programme phase, with at least 20% of their employed time off-the-job (i.e. a training log)

It is recommended that the employer signs off the portfolio of evidence, thereby confirming the demonstration of competence against the knowledge, skills and behaviours (KSBs) across the standard and that the apprentice is ready to take the EPA.

The apprentice must submit their portfolio of evidence to their EPAO when applying for the EPA. An independent assessor will review the portfolio to glean personalised information that will assist the Occupational competence interview component of the EPA. The portfolio is not assessed, it is used to inform the questioning for the Occupational competence interview.

Summary of Roles and Responsibilities

Universities, in their role of EPAO, must appoint:

- Independent assessors to mark an apprentice's technical work-based project and technical interview
- A panel to advise independent assessors

Independent assessors must meet the following requirements:

- Be independent of the on-programme delivery, the apprentice and their employer i.e. there must be no conflict of interest
- Hold an engineering degree and have engineering experience in the rail industry or operated as a discipline-specific engineer at or above the level of the standard; both must be within the specialist area selected by the apprentice
- Have completed an induction covering the requirements of the standard and assessment practice and attend at least one standardisation meeting per year

It is anticipated that the same independent assessor will mark an apprentice's technical work-based project and occupational competence interview to aide efficiency, however this is not a requirement and Universities may schedule independent assessors to ensure cost effective allocation of resources.

Independent assessors should be sourced from another University, industry or a professional body; or if none of the above options are available the independent assessor can be from the same University but must be independent of the apprentice's on-programme learning and assessment.

Independent assessors will be advised by two panel members, who will be present during the technical work-based project presentation and occupational competence interview. Their advisory role is outlined below.

The panel members must be:

- A representative from the apprentice's employer; they may provide the end-point
 assessor with any relevant technical support, advice and guidance such as confirming
 company policies, procedures, processes and providing context on technical
 information; they may for example be the work-based project sponsor, programme
 sponsor, the apprentice's line manager, site engineer, head of engineering or
 operations manager
- A University academic; their role is to provide specialist technical advice on the apprentice's project. In order to maintain independence, they cannot be an academic that was involved during the on-programme element of the apprenticeship.

Optional:

• An assessor from an engineering professional body; their role is to undertake assessment against Chartered Engineer professional standard, if the apprentice wishes their EPA to serve the dual purpose of application for professional recognition.

The panel members must not have any role in the grading decision-making process. They must not provide information on behalf of the apprentice or influence the apprentice in any way. Their role is advisory and to provide information to the independent assessor on request due to the technical nature of the occupation. Independent assessors will solely determine the grade for the technical work-based project and occupational competence interview.

The independent assessor and panel will collectively provide an audience for the presentation, which is reflective of conditions an engineer would face when presenting a project in the workplace.

The employer representative and University academic are expected to provide their services free of charge. Any payment for professional body representation to assess the apprentice in relation to professional body registration lies outside the requirements of the apprenticeship.

The End Point Assessment

The end-point assessment consists of two distinct assessment methods:

- 1. Specialist area, Technical work-based project (including a presentation and questioning)
- 2. Occupational competence interview (supported by a portfolio of evidence)

The end-point assessment must be completed over a maximum period of 32 weeks after the apprentice has met the EPA gateway requirements.

The EPA period commences at gateway sign-off and will last no longer than 32 weeks in total. This will mean there is 24 weeks for work-based project completion and 8 weeks allocated to the conducting of the work-based project presentation and the Occupational competence interview (1 hour) within this window. The work based project presentation should usually be carried out first as the same panel members will also form the audience for the occupational competence interview, in order to mirror a real-world presentation and discussion.

EPAOs must ensure that the Occupational competence interview (supported by a portfolio of evidence) is conducted in a suitable controlled environment. This must be a quiet room free from distraction and influence. It is anticipated that EPAOs will use the apprentice's employer's premises wherever possible to minimise costs. They may be conducted face-to-face or via an online platform e.g. video-conferencing. EPAOs must ensure appropriate methods to prevent misrepresentation are in place should an online option be used. For example, screen share and 360-degree camera.

Requirements for each assessment method are detailed below.

Assessment Method 1 – Specialist area, Technical work-based project (incl. a presentation and questioning)

Key Considerations:

- Synoptic assessment of the apprentice's knowledge, skills and behaviours within the
 chosen specialist pathway that identifies, explores and suggests an improvement issue or
 opportunity that will bring benefit to the business.
- Undertaken over a 24-week period, post-gateway.
- Apprentices must submit a project report to their EPAO a minimum of 4 weeks prior to their project presentation date, and within the 24-week period.
- The 24-week work window cannot officially start until the work-based project topic has been approved as part of the gateway process.
- Must be 8,000 words with a 10% +/- tolerance, conforming to the awarding university's work-based project requirements.
- The work-based project can contain an annex of data, diagrams, pictures, tables, appendices and other forms of appropriate evidence and information to support the report, and these do not form part of the word count.
- The work-based project should be submitted in accordance with the awarding university's procedural requirements.
- Graded as a fail/pass/merit/distinction.

Apprentices will produce a technical work-based project in their specialist area. The work-based project proposal and objectives must relate to their own work environment, be set within the context of one of the specialist pathways and be agreed formally by the employer and academic supervisor. Typically, the technical work-based project will be in relation to business improvements, innovation and/or sustainability.

The academic supervisor will be expected to log the title and scope of the work-based project with the end-point assessors, detailing the nature of the relationship with the standards and demonstrating how it addresses the intended coverage (as identified in Annex A). This will then be approved as suitable as a topic for the work-based project. Should the topic be seen to be insufficient or unsuitable in its relationship to the apprenticeship standard the apprentice will be asked to amend, develop further or change the focus to provide an appropriate coverage of the standard. Approval will signify the start of the EPA period.

The work-based project must be completed within the 24-week period and must be 8,000 words with a +/- 10% tolerance. All work must be appropriately referenced using the agreed referencing system specified by the Awarding University.

An independent assessor will mark the work-based project. Criteria for marking the work-based project are shown in Annex B. The same assessor will Chair the Presentation panel (see below and page 5).

All technical work-based projects must demonstrate competence against the application of the technical knowledge and skills of the specialist area, as well as the application of the following core areas of the standard:

- safe and professional working practices and keeping themselves and others safe
- contribute effectively to the delivery of engineering solutions, and delivering engineering solutions effectively
- working knowledge of problem solving, and use creative thinking and problem-solving techniques
- how teams work effectively, and collaborative working practice

The following behavioural aspects will also be covered as core:

- effective communicating and influencing
- act professionally
- promote and exhibit a self-disciplined, self-motivated and motivational approach to work
- works safely, collaboratively
- quality focused

The work-based project will involve the apprentice identifying and addressing an improvement issue or opportunity, which could relate to products, processes, quality assurance or the business, that once addressed will bring benefit back to the organisation and/or industry. This will ensure the work-based project has a practical element which reflects the day to day work of a Rail & Rail Systems Engineer. The selected topic must be comprehensive, providing scope for the apprentice to show the full range of their knowledge, skills and behaviours as outlined in Annex A. It must demonstrate the apprentice has applied what they have learnt, has understood and is able to connect their learning to the organisation's objectives.

The technical work-based project can focus on an immediate or strategic long-term issue or opportunity and will contain the following (as a minimum):

- 1. Executive summary
- 2. Introduction and background
- 3. Outline of the issue or opportunity
- 4. Justification for the change
- 5. Evidence of effective research
- 6. Analysis of benefits and drawbacks including commercial, contractual and organisational etc.
- 7. Analysis of risks
- 8. Summary of the recommendations
- 9. Consideration of legislation, regulation, industry and organisational policies, procedures and requirements

10. Proposed plan for implementation and stakeholder engagement

The work-based project is expected to draw together the learning from across the standard, including the ability to select and apply knowledge as well as identifying and interpreting complex sets of data, and presenting the proposed solution in an appropriate format, (e.g. demonstrating knowledge requirement 2 "the scientific, technical, engineering, mathematical and design principles". The written report will be submitted to the EPAO for marking upon completion.

Assessment tools must be developed by the End Point Assessment Organisation to support reliable and consistent delivery of assessments, such as, marking criteria/checklists and reporting/feedback template/s.

The work-based project will be graded using the criteria and guidance shown in Annex B.

Technical work-based project presentation

Apprentices will complete a presentation based on their work-based project (as detailed above – Stage 1) to the panel. The presentation will last 30 minutes (+/- 10%). This will be followed by questions from the independent assessor (who may take advice from the panel) to further probe knowledge, skills and behaviours. There will be 6 questions and will take 30 minutes (+/- 10%). The end-point assessment organisation will provide the questions framework and content in conjunction with the assessor.

The work-based project presentation and answers to questions will be assessed against the core and specific knowledge, skills and behaviours as detailed in Annex A, aligned to the grading criteria in Annex B.

The panel will consist of up to four members (see page 5): one independent assessor, a representative from the apprentice's employer, a university academicand a possible fourth member from an appropriate Professional Institution. The independent assessor will have been responsible for assessing the work-based project and will be the panel Chair. Although they may seek technical advice from the panel members, they will make the ultimate decision on grading as other members are there in the advisory capacity outlined on page 5.

The presentation must cover: the technical work-based project scope, outcomes/ achievements, any difficulties faced/lessons learned and recommendations and will be expected to last 30 minutes (+/- 10%). There are no restrictions on how apprentices deliver the presentation or support resources/materials used. However, any equipment requirements, (for example, PowerPoint, whiteboard, flip chart etc) must be agreed with the university – in their role of EPAO, at least two weeks in advance of the presentation. Generally, presentations will consist of 5-8 presentation slides, supported by a handout or A1 poster.

Following the presentation, the independent assessor will ask 6 questions based on the work-based project, and the independent assessor may ask follow-up open questions to probe or seek further clarification. Questions and responses must be recorded by the independent assessor.

Presentation questions will also look to confirm the work-based project grade.

Awarding Universities in their role as EPAO must develop a bank of sample questions, although independent assessors will need to tailor questions according to the work seen in the workbased project. The awarding universities must develop 'question banks' for the sample questions of sufficient size to prevent predictability and be reviewed regularly (at least once a year) to ensure the questions are fit for purpose.

Assessment Method 2 - Occupational Competence Interview (supported by a portfolio of evidence)

Key considerations:

- The Occupational Competence Interview will assess the apprentice's knowledge, skills and behaviour as outlined in Annex A
- The assessment criteria and grading criteria applied are shown in Annex B

About the event -

- Lasts for 60 minutes with a 10%+/- tolerance
- The apprentice should be given at least one weeks' notice of the assessment date.
- The interview must take place on a one-to-one basis between an independent assessor and the apprentice.
- The independent assessor must ask the apprentice 8 open questions; follow up questions are allowed to seek clarification.
- Apprentices may refer to their portfolio when answering the questions.
- Apprentices must be given the opportunity to evaluate their portfolio during the interview i.e. what went well, lessons learnt and recommendations for the future.
- The apprentice may bring a copy of the portfolio with them.
- Must be carried out in a quiet room free from distractions.
- The Occupational competence interview should be recorded electronically, subject to the apprentice's agreement; where permission is not given it is permissible for another independent assessor to be present to document evidence presented.

Prior to the Occupational competence interview -

- The Portfolio of Evidence (and other Gateway evidence requirements) must be received by the EPAO during the Gateway process period. The Occupational competence interview will be based on the portfolio.
- Successful completion of the Gateway requirements will trigger confirmation of the EPA process and the start date for the 24-week technical work-based project work window and 32-week time limit for the entire EPA.

- The End-Point Assessment Organisation assessor must have reviewed the apprentice's portfolio and prepared questions to form the basis of the interview.
- EPAOs must develop 'question-set banks' of sufficient size to prevent predictability and review them regularly to ensure they, and the questions they contain, are fit for purpose.
- EPAO will develop an assessment specification and guidance, and provide training to standardise approaches to occupational competence interviews across their assessors, ensuring reliable and consistent delivery of the occupational competence interview. This will include recording documentation.

Occupational competence interview (Stage 3 – concurrent with Stage 2)

As the final stage of the EPA process, the panel will conduct an Occupational Competence Interview. The interview will synoptically assess knowledge, skills and behaviours across the apprenticeship standard. Apprentices must draw on their work-based evidence (see above) and portfolio of evidence in answering the questions.

The apprentice will be required to prepare a portfolio of evidence which will be mapped to the knowledge, skills and behaviours outlined in Annex A and detail the key information and work done as evidenced and collated during the on-programme period. It provides a structure to the work-based learning and how it has been applied and serves as a framework for how the work-based evidence is organised and where specific evidence can be found. The portfolio must contain at least one piece of evidence relating to each of the knowledge, skills and behaviours mapped to this assessment method. The portfolio must contain concise descriptions, analysis, evaluation, conclusions of the major evidence within the work-based evidence of performance and application of the standards. These must be included with in the evidence which supports the Occupational competence interview.

The interview will last one hour (+/- 10%). The panel will use standardised questions from an agreed set of questions developed by the Awarding University as EPAO. Follow-up questions may be used to probe further into the detail to satisfy the panel of the depth of knowledge, skills and behaviour. This interview will be conducted under controlled conditions.

The Occupational Competence Interview independent assessor will be accompanied by the panel members from assessment method one, and this interview will take place on the same day as that assessment method to minimise cost. The independent assessor will be responsible for questioning the apprentice and assessing the interview, they will make the ultimate decision on grading.

The interview will be assessed against the core and specific knowledge, skills and behaviours as detailed in Annex A, aligned to their chosen specialism.

The set of criteria for marking the technical interview is shown in Annex B. The specification for the Occupational competence interview briefings to be produced by EPAOs for panellists is shown in Annex C.

End Point Assessment – Grading

Performance in the EPA will count towards the overall degree classification. Apprentices cannot successfully complete the degree apprenticeship without successfully passing the EPA.

Performance in the EPA will be separately graded and determine the apprenticeship grade of pass, merit, distinction or fail. If the apprentice has not evidenced the required knowledge, skills and behaviours outlined in the apprenticeship standard, then the standard has not been met and the apprentice has failed.

EPAOs should focus on assessing the apprentice against the higher order descriptors outlined in the Pass and Distinction columns in Annex B, rather than the lower order knowledge, skills and behaviours referenced in the left hand column. By showing competence against the higher order descriptors, it can be assumed that the apprentice is working at or above the level outlined in the standard.

Independent assessors will be responsible for grading each assessment method, in accordance with the requirements detailed in this plan. The grading criteria for each EPA method is detailed in Annex B.

Independent assessor decisions must be subject to moderation (External Examiner review). Grades must not be confirmed until after moderation.

The University – in its role as EPAO must combine the grades for both assessment methods to determine the apprenticeship grade.

Apprentices must pass both assessment methods to gain an EPA/apprenticeship pass, merit or distinction. The table below shows how the grades must be combined to determine the EPA/apprenticeship grade. A pass will demonstrate that the apprentice has met all the requirements of the standard. Apprentices achieving a merit or distinction will be demonstrating performance above the minimum requirements of the standard.

Workplace Project	Technical Interview	EPA grade
Fail	Fail	Fail
Fail	Pass	Fail
Pass	Fail	Fail
Pass	Pass	Pass
Pass	Merit	Pass
Fail	Merit	Fail
Merit	Fail	Fail
Merit	Pass	Pass
Merit	Merit	Merit
Merit	Distinction	Merit
Fail	Distinction	Fail
Pass	Distinction	Pass
Distinction	Fail	Fail
Distinction	Pass	Pass
Distinction	Merit	Merit
Distinction	Distinction	Distinction

Grading for each method:

Grading for the specialist, technical work-based project:

- To achieve a PASS all pass criteria must be met.
- A successful contribution at MERIT will meet the Pass Criteria in all 9 areas of assessment and meet at least 5 of the 8 Merit/Distinction criteria.
- A successful contribution at DISTINCTION will meet the Pass Criteria in all 9 areas of assessment and meet all 8 of the Merit/Distinction criteria.

Grading for the Occupational competence interview:

- To achieve a PASS all pass criteria must be met.
- A successful contribution at MERIT will meet the Pass Criteria in all 9 areas of assessment and meet at least 4 of the 6 Merit/Distinction criteria.
- A successful contribution at DISTINCTION will meet the Pass Criteria in all 9 areas of assessment and meet all 6 of the Merit/Distinction criteria.

Re-sit and Re-take information

Apprentices who fail one or more EPA method will be offered the opportunity to take a resit/re-take. A re-sit does not require further learning, whereas a re-take does.

An individual EPA assessment re-sit/re-take (e.g. Occupational Competence Interview and/or work-based project must be completed satisfactorily within a period agreed with the employer and EPAO (typically six months of the EPA outcome notification for a resit and a longer period of time for a retake to accommodate the additional learning required).

Apprentices will be offered the opportunity to take a re-sit/retake in line with university academic regulations. Both the university and the employer must agree that a re-sit/re-take is an appropriate course of action.

Resits are not available to apprentices wishing to move from pass to merit or distinction. Resits/re-takes will not be awarded a grade higher than pass unless exceptional circumstances originate. Apprentices should have a supportive action plan to prepare for the re-sit/re-take.

Professional Body Recognition

This Apprenticeship Standard aligns with the current edition of the UK Standard for Professional Engineering Competence (UK-SPEC) at Incorporated Engineering (IEng) level. The experience gained and responsibility held by the apprentice on completion of the apprenticeship will either wholly or partially satisfy the requirements for IEng. For more details on the requirements and application process go to the Engineering Council website at www.engc.org.uk

End-point Assessment Organisations Internal Quality Assurance

Internal quality assurance refers to the requirements that a University in their role as EPAO must have in place to ensure consistent, reliable, accurate and valid assessment decisions.

EPAOs for this standard must undertake the following:

- Appoint independent assessors and panel members that meet the requirements as detailed in this plan – see page 5.
- Produce assessment tools and supporting materials for the EPA that follow best assessment
 practice, including a sample bank of projects, sample presentation question bank, technical
 interview question bank and assessment outcome recording documentation. Universities
 must develop project and question banks of sufficient size to mitigate predictability and
 review them regularly to ensure they are fit for purpose. It is recommended that
 representative employers contribute to the development of project/question banks; where
 they do this they must put measures in place to ensure question security.

- Provide induction training for independent assessors in terms of good assessment practice, operating the assessment tools and grading
- Operate regular standardisation events that enable assessors to attend a minimum of one event per year
- Operate moderation (external examiner review) of assessment activity and decisions, through examination of documentation and/or observation of activity, with a minimum of 10% percent of each independent assessors' assessments moderated

External Quality Assurance

The Institute for Apprenticeships is exploring whether QAA can undertake external quality assurance for this standard, arrangements will be confirmed by August 2018.

Implementation

Affordability: The following factors should ensure the EPA is affordable:

- Employers premises should be used for EPA venues where possible
- Remote assessment is permissible, reducing travel costs, e.g. video conferencing
- The practical skills test is based on real work completed for the apprentice's employer, adding value to the employer

Volumes: It is anticipated that there will be 30-40 starts in the first year on this apprenticeship and 30 per year once established.

Annex A: Knowledge, Skills and Behaviours assessed by each assessment method

Assessment method	Key
Specialist, Technical Work-Based Project (and presentation)	TWBP
Occupational Competence Interview (supported by a portfolio of evidence)	OCI

NB: Where a KSB is shown as being assessed in more than one assessment method, this must be assessed in each method separately. EPAOs should not assume that because it has been met in one method, it no longer needs to be assessed in the other.

Knowledge statement: Core

	Assessment method
C/K1 Safe and Professional working practices	TWBP/OCI
C/K2 The scientific, technical, engineering, mathematical and design principles	TWBP
C/K3 How to effectively manage the delivery of engineering solutions within a railway/regulated sector	TWBP/OCI
C/K4 Business planning	TWBP
C/K5 Research methodologies, data analytics, problem solving, continuous improvement	TWBP
C/K6 Team and role theory, and the development of high performing teams and individuals	TWBP
C/K7 Collaborative working techniques	OCI

Knowledge statement: Specialist

Rail Civil Engineering (RC)	Assessment method
RC/K1 Requirements, methods and techniques for the installation and maintenance of the rail track support and track	
foundation.	TWBP/OCI
RC/K2 Impact of the railway environment e.g. geotechnics, structures, bridges, tunnels, embankments, cuttings, vegetation and	TWBP/OCI
drainage, and such interfaces as occur between the physical railway assets and systems.	
Track Engineering (T)	Assessment method
T/K1 Application of rail track standards e.g. Eurocodes, TSIs and industry norms.	TWBP/OCI
T/K2 Materials used in the railway e.g. suitability, strength, properties, plastics, timbers etc.	TWBP/OCI
T/K3 Railway geometry requirements and influences of track layouts from particular aspects of the railway environment, e.g.	TWBP/OCI
geotechnical, structures, bridges, tunnels, embankments, cutting, vegetation and drainage.	

Signalling and control systems (SC)	Assessment method
SC/K1 Requirements, methods and techniques and associated technologies including bespoke rail telecommunications for safe	TWBP/OCI
routing, spacing and control of train's e.g. Fail safe principles, signal point failure, degraded mode, fixed block signalling, and	
automatic train protection. Interface with track assets and bonding/connections.	
SC/K2 Operational rules for the railways and how signalling and control systems operate within these parameters.	TWBP/OCI
Rail Systems Integration (RSI)	Assessment method
RSI/K1 End to end process for Rail Systems Integration e.g. requirements management, project interface management, safety in the railway system, verification, validation and assurance processes.	TWBP/OCI
Traction and Rolling Stock (TRS)	Assessment method
TRS/K1 Design and application of rail related Traction & Rolling Stock (T&RS) engineering systems and the various generic types	TWBP/OCI
of legacy or modern rolling stock in a railway environment across the whole rolling stock lifecycle.	
TRS/K2 Operating principles and interfaces used in legacy and modern rolling stock types and their rolling stock sub-systems	
across or within their T&RS engineering subject matter area(s) (which may be discipline based – e.g. Mechanical, electrical,	TWBP/OCI
electronic, etc. or system based – e.g. Structures, Doors, Brakes, traction, Wheel/Rail interface, etc. or a mix of both).	
Telecoms, Networks and Digital (TND)	Assessment method
TND/K1 Application of telecommunication engineering systems e.g. rail related mobile networks, fixed networks and other	TWBP/OCI
services delivered over networks (e.g. CCTV, rail specific customer information systems)	•
TND/K2 Operating principles in legacy or modern rail specific telecommunication technologies.	TWBP/OCI TWBP/OCI
TND/K3 Physical interfaces between assets and optimisation processes e.g. reliability.	TWBP/OCI
Electrical, Mechanical or Building Services (EMB)	Assessment method
EMB/K1 Physical and systems interfaces between electrical, electronic and mechanical rail assets and systems and other aspects	TWBP/OCI
of the railway and operating requirements, implications and constraints of these. Interface with track assets and	
bonding/connections.	
EMB/K2 Asset reliability, availability, maintainability within defined safety parameters.	TWBP/OCI

Skills statements: Core

	Assessment method
C/S1 Keep themselves and others safe	TWBP/OCI
C/S2 Support the technical input to the development of rail standards, specifications and means of compliance	TWBP/OCI
C/S3 Manage value engineering and whole life costing	OCI
C/S4 Deliver rail and rail systems engineering solutions effectively	TWBP
C/S5 Contribute to and attend Senior Management and Executive meetings	OCI
C/S6 Managing financial systems, forecasts and budgets	OCI
C/S7 Use evidence-based approaches	TWBP
C/S8 Lead/manage multi-disciplinary teams	OCI
C/S9 Work effectively and collaboratively	OCI

Skills Statements: Specialist

Rail Civil Engineering (RC)	Assessment method
RC/S1 Apply civil engineering skills e.g. geotechnics to support the effective performance and operation of the business.	TWBP/OCI
RC/S2 Provide expert advice and leadership specific to the Rail Civils discipline, but cognisant of how the railway works as an	TWBP
integrated, complex system.	
RC/S3 Apply and manage a wide range of Rail Civils skill-sets e.g. geotechnics, structures, bridges, tunnels, embankments,	TWBP/OCI
cuttings, vegetation and drainage in order to support and manage research, development, design, procurement, logistics,	
planning, delivery, quality assurance, inspection, testing, installation, commissioning, maintenance, life cycle management,	
decommissioning and environmental compliance.	
Track Engineering (T)	Assessment method
T/S1 Apply and manage a wide range of track engineering skill-sets e.g. surveying for track design (for heavy rail and light rail	TWBP/OCI
projects) to support the effective performance and operation of the business.	
T/S2 Provide expert advice specific to the track discipline, but cognisant of how the railway works as an integrated, complex	TWBP
system.	
Signalling and control systems (SC)	Assessment method
SC/S1 Apply rail signalling and control systems skills e.g. independence of design checking and verification, assessing risk,	TWBP/OCI
manage interdisciplinary reviews.	

SC/S2 Produce rail signalling and control solutions for the railway industry based on known and defined concepts and principles	TWBP/OCI
and new and novel rail management system approaches.	
Rail Systems Integration (RSI)	Assessment method
RSI/S1 Take responsibility for managing the development of integrated designs that shall maintain or improve on the existing	TWBP/OCI
safety, reliability, capability (capacity), performance, efficiency and maintainability of the railway.	
RSI/S2 Undertake systems integration engineering skills in line with mandatory company and client procedures, and relevant	TWBP/OCI
national / international legislation e.g. interoperability.	·
Traction and Rolling Stock (TRS)	Assessment method
TRS/S1 Develop, produce, alter, review and approve detailed specifications relevant to new or altered traction and rolling stock	TWBP/OCI
assets.	
TRS/S2 Obtain and retain relevant rail industry specific technical accreditation/ licences applicable to role.	TWBP/OCI
Telecoms, Networks and Digital (TND)	Assessment method
TND/S1 Support rail telecommunication, network and digital engineering design, application, configuration, operation,	TWBP/OCI
maintenance or decommissioning and disposal.	
TND/S2 Undertake company standards review and development as a designated subject matter expert within the discipline.	TWBP/OCI
Electrical, Mechanical or Building Services (EMB)	Assessment method
EMB/S1 Undertake standards review, operational practice, approvals and assessment of relevant rail asset types in line with	TWBP/OCI
technical knowledge.	
EMB/S2 Approve and certify rail related electrical and mechanical and building services assets, as appropriate within the	TWBP/OCI
defined safety legislation e.g. building regulations.	

Behaviour statements	Assessment method
B1 Communication and influencing skills	TWBP
B2 Professionalism	OCI
B3 A proactive self-disciplined, self-motivated and motivational approach to work	TWBP
B4 Safe working practice	TWBP/OCI
B5 Collaborative working	TWBP/OCI
B6 A focus on quality	OCI
B7 Continuous Professional Development	OCI

Annex B: Grading Criteria for each assessment component

Key for Specialist area coverage

Specialist Areas	Code
Rail Civils	RC
Track	Т
Signals and control systems	SC
Rail System Integration	RSI
Traction and Rolling Stock	TRS
Telecoms, Network and Digital	TND
Electrical, Mechanical or Building Services	EMB

EPAOs should focus on assessing the apprentice against the higher order descriptors outlined in the Pass and Distinction columns rather than the lower order knowledge, skills and behaviours referenced in the left hand column. By showing competence against the higher order descriptors, it can be assumed that the apprentice is working at or above the level outlined in the standard.

Fail- The apprentice will be deemed to have failed if they do not meet the criteria outlined in the pass descriptor.

The Specialist, Technical Work-Based Project (TWBP)

Area of Standard	Pass Criteria - The apprentice's project must demonstrate that they:	A successful contribution at MERIT will meet the Pass Criteria in all 9 areas of assessment and meet at least 5 of the 8 Merit/Distinction criteria below. A successful contribution at DISTINCTION will meet the Pass Criteria in all 9 areas of assessment and all of the 8 Merit/Distinction criteria below.
Safe and Professional working practices		
Core: C/K1, C/S1 B3 and B4 Specialism: N/A	Evidence of consistent safe and professional working practices as being central to work, keeping themselves and others safe. Approach demonstrates professionalism, respecting others and acts ethically.	
Scientific, technical, engineering, mathematical and design principles Core: C/K2 Specialism: RC/K1 and RC/S1 T/K1 and T/S1 TND/K1 and TND/S1 SC/K1 and SC/S1 RSI/K1 and RSI/S1 TRS/K1 and TRS/S1 EMB/K1 and EMB S1	Correct selection, application and interpretation of principles and the results and, as appropriate, the application of requirements (e.g. Standards), methods and techniques, leading to the succcessful delivery of a project or task, cognisant of relevant risk controls pertaining to the discipline (e.g. electrical isolations).	Utilises a range of principles and techniques to enhance the robustness of decisions. Demonstrates insight and precision in the way principles and techniques are selected and applied to enhance the robustness of decisions and improve the reliability of results.

Manage the delivery of engineering solutions within a railway/regulated sector Core: C/K3 and C/S4 Specialism: RC/K1, RC/K2, RC/S1, RC/S2 and RC/S3 T/K1, T/K2 and T/K3, T/S1 and T/S2 SC/K1, SC/K2, SC/S1 and SC/S2 RSI/K1, RSI/S1 and RSI/S2 TRS/K1, TRS/K2, TRS/S1 and TRS/S2 TND/K1, TND/K2, TND/K3, TND/S1 and TND/S2 EMB/K1, EMB/K2, EMB/S1 and EMB/S2	Management of delivery shows correct levels of planning, implementation and monitoring, as well as evaluation of delivery and appropriate consideration of risk controls. Clear evidence of compliance with standards and regulations, and appropriate contribution to their development, review etc.	Utilises management techniques, theory and practice to deliver solutions. Demonstrates strategic leadership, project management techniques, theory and practice to deliver engineering solutions.
Business planning Core: C/K4 Specialism: RC/K1, RC/K2, RC/S1, RC/S2 and RC/S3 T/K1, T/K2, T/K3, T/S1 and T/S2 SC/K1, SC/K2, SC/S1 and SC/S2 RSI/K1, RSI/S1 and RSI/S2 TRS/K1, TRS/K2, TRS/S1 and TRS/S2 TND/K1, TND/K2, TND/S1 and TND/S2 EMB/K1, EMB/K2, EMB/S1 and EMB/S2	Correct application of business planning tools and techniques meaning the engineering solution is well managed and successfully implemented.	Uses a broader range pf business planning tools and techniques to exceed key performance indicators
Research methodologies, data analytics, problem solving and continuous improvement Core: C/K5 and C/S7 Specialism: N/A	Clear definition of scope and problems. Well-structured data analysis using at least one appropriate statistical tool or analytical technique to test engineering information, data and design using calculations pertinent to the work-based project topic such as probability	Scope, boundaries and problems are defined to allow predicted and unforeseen benefits of the design solution to be realised. Utilises a wide range of techniques and tools to interpret information and analyses their benefits to improve of change processes.

	distributions, significance testing and confidence limits, regression and correlation.	
Team and role theory, the development of high performing teams and individuals Core: C/K6 Specialism: N/A	Demonstrates understanding of team and role theory, and evidence of application of theory to produce intended outcomes.	Applies theory with insight and awareness of risks and rewards.
Manage value engineering and whole life costing Core: N/A Specialism: RC/K1, RC/K2, RC/S1, RC/S2 and RC/S3 T/K1, T/K2, T/K3, T/S1 and T/S2 SC/K1, SC/K2, SC/S1 and SC/S2 RSI/K1, RSI/S1 and RSI/S2 TRS/K1, TRS/K2, TRS/S1 and TRS/S2 TND/K1, TND/K2, TND/S1 and TND/S2 EMB/K1, EMB/K2, EMB/S1 and EMB/S2	Evidence of analysis, synthesis, evaluation and critical appraisal is accurately presented relevant to the discipline.	Compares and contrasts evidence of analysis, synthesis, evaluation and critical appraisal. Presents this clearly and supported by a detailed appraisal of evidence and insight specific to the discipline.
Deliver rail and rail systems engineering solutions effectively Core: C/S2 and C/S4 B3 and B5 Specialism: RC/K1 and RC/S1 T/K1 and T/S1	Applied appropriate theoretical and practical methods to design, develop and commission engineering solutions.	Solution exceeds expectations in relation to key impact measures.

SC/K1 and SC/S1 RSI/K1 and RSI/S1 TRS/K1 and TRS/S1 TND/K1 and TND/S1 EMB/K1 and EMB/S1		
Use of communication and influencing skills Core: B1 Specialism: N/A	Overall approach to presentation demonstrates consideration of how best to present and communicate the key content and messages.	Articulate presentation; able to respond to technical questioning with ability to respect opinion of others. Confident, articulate presentation; able to respond to technical questioning confidently and convincingly with ability to respect opinion of others.

Annex C: The Occupational Competence Interview (OCI)

Key for Specialist area coverage

Specialist Areas	Code
Rail Civils	RC
Track	T
Signals and control systems	SC
Rail System Integration	RSI
Traction and Rolling Stock	TRS
Telecoms, Network and Digital	TND
Electrical, Mechanical or Building Services	EMB

EPAOs should focus on assessing the apprentice against the higher order descriptors outlined in the Pass and Distinction columns rather than the lower order knowledge, skills and behaviours referenced in the left hand column. By showing competence against the higher order descriptors, it can be assumed that the apprentice is working at or above the level outlined in the standard.

Fail- The apprentice will be deemed to have failed if they do not meet the criteria outlined in the pass descriptor.

Area of Standard	Pass Criteria - The apprentice's Occupational Compentence Interview must demonstrate that:	Merit/Distinction Criteria A successful contribution at MERIT will meet the Pass Criteria in all 9 areas of assessment and meet at least 4 of the 6 Merit/Distinction criteria below. A successful contribution at DISTINCTION will meet the Pass Criteria in all 9 areas of assessment and meet all 6 of the Merit/Distinction criteria below.
Safe and Professional working practices Core: C/K1 and C/S1 B2 and B4 Specialism: RC/K1 and RC/K2 T/K1, T/K2 and T/K3 SC/K1 and SC/K2 RSI/K1 TRS/K1 and TRS/K2 TND/K1, TND/K2 and TND/K3 EMB/K1 and EMB/K2	Clear evidence of safe and professional working practices being central to work, including protecting the safety of self and others, and their ethical approach to work.	
Delivering rail and rail systems engineering solutions effectively Core: C/K3 B6 Specialism: RC/K1, RC/K2, RC/S1, and RC/S3 T/K1, T/K2, T/K3 and T/S1 SC/K1, SC/K2, SC/S1 and SC/S2 RSI/K1, RSI/S1 and RSI/S2	Management of delivery, including identifying new innovations and ways of working. Shows correct levels of planning, resource allocation, decision making, risk management, implementation and monitoring, as well as evaluation of delivery.	Utilises management techniques, theory and practice to deliver solutions that exceed expectations in relation to key impact measures. Demonstrates strategic leadership, project management techniques, theory and practice to deliver engineering solutions.

TRS/K1, TRS/K2, TRS/S1 and TRS/S2 TND/K1, TND/K2, TND/K3, TND/S1 and TND/S2 EMB/K1, EMB/K2, EMB/S1 and EMB/S2		
Collaborative working techniques		
Core: C/K7 and C/S9 B5 Specialism: N/A	Collaborative working techniques are understood, able to be selected, applied and critiqued.	Collaborative working has a direct impact on key impact measures, and desmonstrates that these have been exceeded.
Support the technical input to the development of rail standards, specifications and means of compliance Core: C/S2 Specialism: RC/K1, RC/K2, RC/S1, and RC/S3 T/K1, T/K2, T/K3 and T/S1 SC/K1, SC/K2, SC/S1 and SC/S2 RSI/K1, RSI/S1 and RSI/S2 TRS/K1, TRS/K2, TRS/S1 and TRS/S2 TND/K1, TND/K2, TND/K3, TND/S1 and TND/S2 EMB/K1, EMB/K2, EMB/S1 and EMB/S2	Analysis, synthesis, evaluation and critical appraisal evident in the level of understanding and application of skills shown by the apprentice.	
Manage value engineering and whole life costing Core:	Demonstrates understanding of some major ideas related to value engineering and whole life costing.	Demonstrates appreciation of value engineering and whole life costing in their specialist sector showing knowledge and experience of active involvement in both areas.

C/S3 Specialism: N/A		Able to discuss value engineering and whole life costing as applying to their specialist sector demonstrating critical appraisal, insight and reflection.
Contribute to and attend Senior Management and Executive meetings Core: C/S5 Specialism: N/A	Active and purposeful contributions at senior management and executive meetings evident.	
Managing financial systems, forecasts and budgets Core: C/S6 Specialism: N/A	Demonstrates application of financial systems, forecasts, reviews and budgets is evident with examples of management articulated.	Includes evidence of appropriate financial considerations used to justify, develop and commission new process(es) or equipment, on time and within budget. Includes understanding of the appropriate financial and business techniques used to justify, develop and commission new process(es) or equipment, on time, under budget and/or exceeding predicted performance.
Lead/manage multi-disciplinary teams Core: C/S8, C/S9 Specialism: N/A	Demonstrable experience of leading or managing multidisciplinary teams.	Demonstrates the ability to work with all staff within a matrix structure; understanding the organisational purpose and values to support a high performance work culture. Demonstrates the ability to lead, motivate and influence people within a complex matrix structure; articulating organisational purpose and values to create an inclusive, high performance work culture.
Continuous Professional Development Core: B7	Understanding of the importance of CPD backed up by planning demonstrating intent.	Demonstrates a positive mind-set and willingness to learn, displaying proactive approach and the ability to take the initiative when it comes to personal CPD.

Specialism:	
N/A
